

ABSTRACT

In a contents distributing system, a managing server is equipped on a network with which all user terminals being capable
5 of utilizing contents are allowed to connect, and a member card is issued to a user operating the user terminal. In the contents distributed from an information service server, a middleware for storing a history of distributing contents and a history of utilizing contents (log data etc.) to the member card and for
10 transmitting this history of utilizing contents along with a user ID to the managing server is embedded. The managing server generates information indicating how much the particular contents are distributed from the information service server and how much the particular contents are utilized by the user, based on the collected history of utilizing contents and the collected user ID,
15 and determines an amount of charging based on the charging rule.
